

# Plugin registration system

## Short Description

Review this code for plugin registration:

```
class WordProcessor:
    PLUGINS = []

    def process(self, text):
        for plug in self.PLUGINS:
            text = plug().cleanup(text)
        return text

@register(WordProcessor.PLUGINS)
class RemoveVowelExtension():
    def cleanup(self, text):
        import re
        return re.sub(r'[eyuioa]', '', text)
```

## Topics

- Decorators with parameters
- Designing types

## Requirements

- Implement the register decorator
